

## EZAK IMAK Hun in the Sun

Jäger	Bomber	
	Hun-in-the-Sun	Ezak-Imak
	0,95	1
	1	0

Dieses Spiel besitzt offensichtlich keinen Sattelpunkt (warum?). Wieder Jäger noch Bomber haben keine Strategien, die sich nicht durch den Gegner zu dessen Vorteil auszuwirken lassen, wenn dieser die Strategie im Voraus erfährt. Beide Parteien

a14

**Inventor: Satan**

**Year: ~1950**

Ezak Imak (Kami Kaze in reverse) VS Hun in the Sun. The Japanese Attacked the US Airforce most from bottom up 95% but sometimes from the top to bottom 5%, so the US Airforce had to watch both sides. Today mental institutions use the same algorithm for psychological warfare. 95% Patients are Victims, 5% are forced to run amok <https://www.springer.com/us/book/9783764353384>

Same Algorithm can also be used in Psychology, Politics ..., for example 95% Slaves in Companies and 5% small hitlers

## PATTERN RECOGNITION

**Inventor: Norman Joseph Woodland and Bernard Silver**

**Year: ~1949**

<https://marciandolt.ch/Hackers-Cardgame/jpg/EN/>

don't trust QR-Code Apps that much

## F=TVS<sub>r</sub> Equation for intelligence

a21

**Inventor: Alex Wissner Gross**

**Year: ~1999**

In my opinion hierarchical systems are bad (a13) so there would be alternatives, for example this equation you see in the title. For example this algorithm would provide that no sheep gets lost (m68) if one would implement it in society, social systems, facebook, twitter...

I studied Computer Science some years but for me it is so complicated to implement it.

Source: [https://www.youtube.com/watch?v=ue2EmTJ\\_Xo](https://www.youtube.com/watch?v=ue2EmTJ_Xo)

[https://www.ted.com/talks/alex\\_wissner\\_gross\\_a\\_new\\_equation\\_for\\_intelligence](https://www.ted.com/talks/alex_wissner_gross_a_new_equation_for_intelligence)  
**Really great work**, but maybe you could work on your Entertaining Skills and see a fashion consultant, but i've only seen this one video, maybe i'm wrong.

## Procastinate when 80% solved

a16

**Inventor: xxxx**

Algorithm on my "computer" when i try to do things, to fix things, to finish relevant business. There are problems like extending pan-usb with uidsk2 where **unknown** starts an algorithm, that prevents me from solving the problem. The algorithm starts tons of new problems that are also relevant, i try to solve them all but always when i solved 80% of a task, the next problem opens or even starts a suicide death bot (a16) against me. Prevents that problems are finally being solved. There are some sort of "resonators" (Ingress), that prevent the whitehat hacker / whistleblower from solving it. Resonators maybe just other people that are being activated. If these are real people they are maybe being activated with BigData from the NSA / CIA Data Retention System that would prove earlier sins of this human(?) "BOTS", Mathematically spoken possibly / partially transitive. t.l... transmits now "this is non-solvable problem, hahaha" (= psychological warfare)

## Access Based Enumeration Part 2

a18

**Inventor: ???**

**Year: ~???**

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Network. If you would implement that on a client computer, you could do much more dirty tricks. For example if a **Pedophilia Victim**, a **Torture Victim** or a Victim that was Subject to **illegal Human Experiments** would find out who did that all to him they would maybe want to keep the victim silent. So they would **upload for example pedophilia images on the computer of the victim**, and would find the pedophilia content. If the victim would look at the same Folder on his Computer, the Access Based Enumeration algorithm would hide this images, so he would not know and the **jury (m37 card)** would judge the **victim** of Pedophilia when he was 10 years old, the would help to hide the illegal human experiments ...

## NORMAL- DISTRIBUTION

a1

**Inventor: Carl Friedrich Gauss**

**Year: ~1801**

E.g. the distribution of intelligence in society is normal-distributed. If you would find out that people that run amok or suicide quite often after they have been "theraped" by mental institutions and then they are shut away maybe in the same mental institution after they run amok more than the normal-distribution would predict, then you maybe should really ask some questions. Personal Traits (eg. Mayer-Briggs) are norami-distributed too. So these formulas are quite useful to find out if one tells the truth or not. But it is **not evidence**, but maybe something one should investigate.

## Access Based Enumeration

a5

**Inventor: ~???**

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Network. The same principle maybe applies to websites, youtube, maybe even gitub... if you look at the **m50** card the same system "could" be used to **split society into two+ separate groups**, and there would be even some triggers known to some of the older groups to start a civil war between this two groups. Maybe to explain **Access Based Enumeration++** to the society would **deescalate** this problem a bit. So update your people with this knowledge. I learned about Access Based Enumeration at ABB Technikerschule Baden, hopefully the teach this function not for the dark-side... if done in the graphics card or graphics driver one could manipulate things even if he checked if the file was transmitted correctly, so one need to print all evidence.

## Efficiency Detection

a22

**Inventor: ~???**

When i work with my computer there seems to be an algorithm that detects when my work is efficient and then stops me with dirty tricks...

The problems are not always in the same order, but efficiency seems to be an eventtrigger that starts such things smoke1, m98, m99, acid in my face cream...
